

5 Ways to Empower Your Team with New HP AI PCs

Discover how artificial intelligence can help you create a more productive, secure, and collaborative work environment.

Intel vPro® powered by Intel® Core™ Ultra 7 processors

Discover the Power of Intel Inside®

Artificial intelligence has evolved from a technological curiosity into a critical business resource. It is no longer just about experimenting with tools like ChatGPT or Midjourney. Organizations are now integrating AI into everyday workflows to provide teams with a genuine competitive advantage and help businesses stand out.

However, for employees to fully benefit from AI, they need devices specifically designed for it.

That's where the **HP EliteBook X G2i Series** comes in: AI-optimized laptops designed to meet new technological demands and redefine day-to-day efficiency.

From day one, they deliver five key benefits.

01 Drive Innovation and Boost Productivity

Challenge: Overcoming Technology Limitations

Teams working with slow, outdated computers often struggle to stay focused and perform at their best. This not only impacts productivity but can also create frustration and reduce employee engagement.

HP Solution

The HP EliteBook X G2i series enables employees to work seamlessly, regardless of their style or environment, thanks to support for AI-powered applications on Windows 11 Pro. These laptops feature Intel® Core™ Ultra processors, which integrate CPU, GPU, and NPU components to deliver superior performance. This power allows them to run AI-based tools without draining the battery, resulting in greater agility, fewer interruptions, and a much smoother experience.

Copilot Use Case

With Microsoft Copilot in Windows, teams can create content based on prompts, summarize documents, collaborate intelligently, and extract relevant insights. Studies show that while creating content, users save approximately one minute for every document created.

70% of Copilot users in Windows report being more productive.

Example use case: More effective meetings

Whether your team is brainstorming over Zoom or strategizing in Microsoft Teams, the HP EliteBook X G2i series' AI noise cancellation, automatic background blur, and extended battery life enable seamless, uninterrupted collaboration. This helps them feel connected and work as a true team.

70%

of Copilot users on Windows report being more productive, and 68% say it has improved the quality of their work

81%

of employees report losing time in hybrid meetings due to technical glitches

02 Transform Virtual Meetings into Real Collaboration

Challenge: Improve collaboration in hybrid environments

In a hybrid environment, fostering collaboration is key to workplace well-being. Studies show that increasing the happiness scale by just one point (from 0 to 10) can translate to 12% more productivity. However, many of these interactions now take place via video call, and not always with sufficient quality to maintain a real connection between people.

HP Solution

With integrated Poly Studio technology, the HP EliteBook X G2i series delivers smooth, immersive video calls without interruption, even in noisy or changing environments. These laptops help your teams look and sound clear at all times, thanks to advanced AI-powered features: four calibrated speakers, intelligent noise reduction, two microphones with signal-to-noise calibration, dynamic voice adjustment, and studio mode.

03 Protect your Data Against Sophisticated AI Threats

Challenge: Protecting devices against AI threats

The more valuable the devices, the greater the risk of cyberattacks. The evolution of AI has multiplied both the opportunities and the threats, and your IT team knows this well. Today, it's no longer enough to rely on software alone: security must be built into the hardware itself to protect sensitive data against AI-driven threats.

75%

of security experts say cybercrime has increased in the last year, and 85% attribute it directly to the malicious use of AI

AI optimizes performance with Windows 11 Pro, making devices faster and using less power for optimal collaboration. This allows employees to quickly achieve their goals instead of waiting for slow technology to do the work.

Example use case: Longer battery life

Those who work outside the office often forget their charger or have trouble finding an outlet. With an AI-optimized battery, and equipped with up to 6 long-life cells, they can work from anywhere without interruption.

Gen Z and Millennial professionals are more than twice as likely to suffer from burnout as Baby Boomers.

04 Achieve More in Less Time and With Less Effort

Challenge: Combat workplace stress

Workplace stress continues to rise: 74% of workers in the U.S. report feeling overwhelmed. In this context, every minute counts. Your employees can't afford to waste time opening applications, waiting for a video call to connect, or searching for outlets to charge their devices.

HP Solution

Equipped with AI-enhanced chips that respond faster and perform better, the HP EliteBook X G2i series laptops come with an Intel® Core™ Ultra processor designed for the latest AI software.

05 Make AI Work for You

Challenge: Getting the most out of AI

Integrating AI can seem complicated, especially from an IT perspective. Where do you start? Which tools should you choose? It can be daunting at first, but it's simpler than it seems.

85%

of companies want to take advantage of the benefits of AI, but 57% of managers admit to feeling overwhelmed with its integration.

HP Solution

The HP EliteBook X G2i series simplifies the path for IT. These laptops are the gateway to a new way of working: more agile, efficient, and future-ready. With top-tier hardware, advanced AI capabilities, and Windows 11 Pro, your business can take a real leap toward transformation.

Example use case: Fast results with AI

Instantly improve the efficiency of your teams with the next generation of HP Windows 11 Pro AI PCs. Thanks to the intuitive Copilot experience in Windows, your employees can focus on more important tasks and easily master AI tools that help them be more productive, work more nimbly, and find what they need in less time.

At HP, we don't just provide solutions: we walk with you into the future

For decades, we've been helping businesses like yours meet new technological challenges. Our mission is to boost productivity, simplify processes, and make work easier for both your IT team and the rest of your workforce. Trust our new AI-powered PCs, solutions, and services to keep your data secure, improve your team's performance, and move forward with greater impact and efficiency.
